

NOTICE

Rochester Area Reliability Project Construction Update

As you may know, Rochester Gas and Electric (RG&E) has started construction on the Rochester Area Reliability Project (RARP). The RARP is necessary to improve the reliability of our electric power transmission system, and meet increasing demand for electricity in the Rochester area. This investment in our electric infrastructure includes building or rebuilding 27.6 miles of 345- and 115-kilovolt (kV) transmission lines; upgrading three existing substations in the Towns of Gates and Henrietta, and in the City of Rochester; constructing a new 345-kV/115-kV substation (Station 255) in the Town of Henrietta; and upgrading two other substations in the Towns of Lewiston and Somerset in Niagara County.

This is to inform you that RG&E is engaged in construction activities on the RARP within the Town Gates. Activities include the installation of manholes and excavation of the duct bank trench for installation of the new underground 115-kV Circuit 940 transmission line. After excavation PVC conduits will be installed and these will provide a sleeve that the electrical cable can be pulled through.

Construction activities are authorized under project's Certificate of Environmental Compatibility and Public Need to occur Monday through Saturday between the hours of 7:00 am and 6:00 pm.

If you have questions, please contact our information line at 1-800-647-9899.
